

MET

Research Grade Anti-Human MET/c-Met/HGFR (CE-355621) mAb

Catalog No.	DHC34205A DHC34205B	Quantity:	100 µg 1.0 mg
Alternate Names:	Hepatocyte growth factor receptor, HGF receptor, HGF/SF receptor, Proto-oncogene c-Met, Scatter factor receptor (SF receptor), Tyrosine-protein kinase Met, CE-355621, CE 355621		
Description:	Research Grade Anti-Human MET/c-Met/HGFR (CE-355621) is a human monoclonal antibody that binds to the extracellular domain of proto-oncogene c-Met (HGFR.) The antibody antagonizes c-Met function by blocking the binding of the ligand HGF to c-Met and by blocking ligand-dependent c-Met activation, which subsequently induces internalization and downregulation of the receptor.		
UniProt ID (target):	P08581		
Target:	Human HGF receptor (Proto-oncogene c-Met)		
Concentration:	1.0 mg/ml, lot specific		
Source:	Mammalian cells		
Isotype:	Human IgG		
Formulation:	0.01M PBS buffer, pH 7.4		
Purity:	> 95% by SDS-PAGE		
Endotoxin Level:	≤ 0.01 EU/µg by LAL analysis		
Purification:	Protein A/G affinity chromatography from cell culture supernatant		
Clone:	CE-355621		
Applications:	Functional studies		
Storage & Stability:	Store at 2-8°C for up to 1 week, or in working aliquots at -20°C to -80°C for up to 1 year. Avoid freeze/thaw cycles.		

NOT FOR HUMAN USE. FOR RESEARCH ONLY. NOT FOR DIAGNOSTIC OR THERAPEUTIC USE.
