

JSB-1 negative control antibody, clone CT6 Monoclonal Antibody

Catalog No.: MON 9011C

Quantity: 1 ml

Specificity

The antibody reacts with a Guinea pig lymphocyte subset probably analog to human CD8 (cytotoxic/suppressor) subset.

Immunoglobulin type

Murine IgG₁

Use

Although this monoclonal originally was developed for the detection of a Guinea pig lymphocyte subset, it also can be used as a negative control for the JSB-1 monoclonal antibodies because it is of the same IgG subclass. It does not react with the 170-180 kD glycoprotein which is strongly correlated with the degree of Multi-Drug-Resistance.

Instructions for use

This antibody should be used identically to JSB-1, MON 9011.

Presentation

1 ml antibody solution. Sufficient for 100 tests.
